

“This book, edited by Professor Meltem İnce-Yenilmez and Associate Professor Ufuk Bingöl, presents and analyses income disparity, poverty, and economic well-being in emerging countries. Each chapter provides significant contributions to the literature. The strongest feature is the correct and sound econometric/statistical analysis and methodologies followed in the chapters. It is a perfect fit for researchers working on the gender gap, discrimination, income inequality, and poverty in emerging economies. It can be used as an additional text for graduate classes.”

—**Onur Burak Çelik**, Boston University

“This book offers a unique opportunity that focuses on key issues in emerging economies. Whilst economic growth is crucial for these economies tackling inequalities, fairness and human right related issues is key to growth and prosperity. Addressing fiscal and social policies that enhance equalities and economic growth is key for enriching debates around these issues.”

—**Hafez Abdo**, University of Nottingham (UK)

“The book contains interesting insights into the new economies after two years of effects from the Covid-19 pandemic. The book, divided into 14 chapters, addresses the different needs of the modern world in different economic, cultural, and political contexts in the light of the consequences due to the strong impacts of the pandemic on the growth of world economies. The contents of the book, supported by updated data, rich bibliographic sources, and theoretical schematizations, deserve a thorough reading.”

—**Biagio Simonetti**, University of Sannio (Italy)

“This book explores the different dimensions, as well as the causes of income inequality in emerging countries, with a particular focus on the case of Turkey. The various issues addressed—from job satisfaction to the position of financial markets, including health issues and the impacts of migratory phenomena—make it a reference for anyone interested in understanding the mechanisms of inequality and their consequences on development processes.”

—**Andre Torre**, French National Institute for Agriculture, Food, and Environment
